

Summary

Final-Year Computer Science student at Universitas Negeri Semarang with 1 year of experience in software engineering. Passionate about software development, scalable systems, and AI-powered applications. Interested in building technology-driven solutions to solve real-world problems.

Experiences

Going Macro | Backend Developer June 2026 - Present
Como, Italia

- Built scalable backend system services for AI Platform.
- Designed and managed PostgreSQL database structures.
- Integrated backend systems with AI-driven features (RAG) and external services.
- Documented every features and APIs.

Haloop.AI | Fullstack Developer Aug 2025 - May 2026
Singapore

- Developed Haloop.AI Customer Web with Next.js.
- Built AI agent workflows using LangGraph and TypeScript for the Haloop.AI Contact Assistant.
- Designed and managed PostgreSQL database structures through Supabase.
- Built scalable backend services and RESTful APIs for the Contact Management platform.
- Integrated backend systems with AI-driven features to support automation and customer interaction workflows.
- Implemented file management features using Cloudflare R2, including upload, storage, and access handling for application assets.

Rapier Technology International | Backend Intern January 2026 - May 2026
Tangerang, Indonesia

- Developed RESTful API endpoints to support core business functionalities.
- Designed database schemas and managed relational data using MySQL and PostgreSQL
- Integrated AWS S3 for scalable file storage and asset management.
- Implemented data caching with Redis
- Collaborated with frontend developers and the design team to ensure accurate implementation of application requirements and user workflows.
